Manufacturing Procedure:

1. Prepare phase A. Heat phase A to 85°C.
2. While phase A is heated, sprinkle Siligel™ under slow mixing, using a tooth propeller, and increase speed until maximum, avoiding the incorporation of air.
3. When the water phase reaches at least 80°C, sprinkle Viscogum. Progressively increase mixing speed until maximum, avoiding incorporation of air and keep under mixing until the product is homogeneous.
4. Slowly incorporate phase D (Texapon®) under medium mixing to avoid foaming.
5. Add ingredients of phases E and F one by one.
6. Poor the product into containers immediately (it must remain above 80°C).
